SAP Adds More Modules to Business One

By Subashini Selvaratnam

SAP Malaysia Sdn Bhd recently announced add-on modules to its SAP Business One, which is a business management solution that manages and connects critical operations such as sales, finance, purchasing, inventory and manufacturing for small businesses.

The additional modules such as human resource, retail and manufacturing are built by SAP partners, and are sold as one product.

According to SAP Malaysia's country channel sales manager for small enterprise Alwyn David, the SAP Business One is designed for companies with revenue of RM150 million and below.

"With these additional modules, SAP is delivering a more robust set of business management tools that enable customers to grow through higher productivity, global trade and better business information analysis," he explained.

One such add-on module is the KZEN HR One, a human resource solution from KaiZenHR Sdn Bhd. Here, the solution has been enhanced in the area of effective date of each employment, positioning and service.

KZEN HR One also offers reporting features such as Mail Merge, which is a feature of MS Office Word that allows users to link the human resources data to the preset mail template.
